What do you do?

HTML5 kicked into 2014

Another three years of crushing hype

- The Register | 4th February 2011

“Not using HTML5 is like not using English because it hasn’t been finished”

HTML

YOU NEED TO DEVELOP FOR
THE WEB*

* All caps signifies importance of this statement

But it won't do
what a native app will!

Abstract

These are the requirements intended to be met in the development of client-side APIs that enable Applications and Web Widgets that interact with devices services such as Calendar, Contacts, Ca

Do you have a significant use case that needs a native app?

Many tasks + cheap computing = many devices

Each form factor suits certain uses more than others

'Glance' Device

Weather, contact information, sports results,
meeting room status

‘Watch/Ultra compact’ Device
Who’s calling, number of e-mails waiting

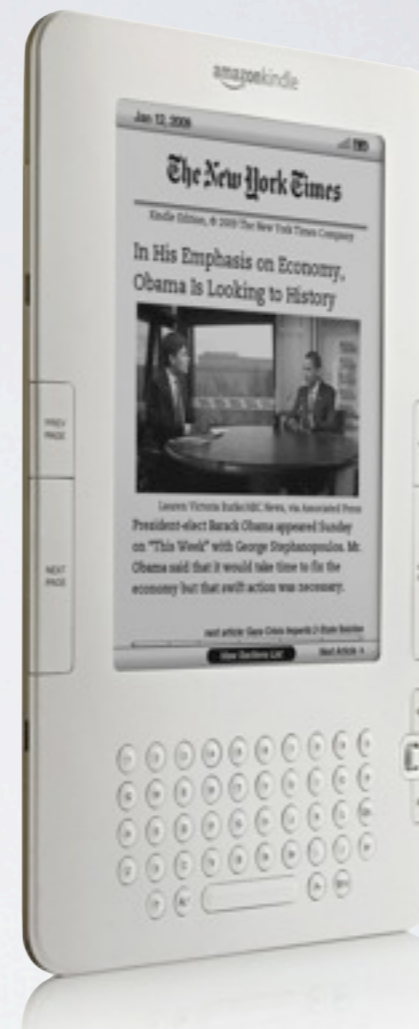

Tablet Device

Web browsing, e-mail,
photo viewing, mapping, visual design

E-Reader

Low eyestrain document display, note taking

Smart Phone

Fast e-mail, simple tasks e.g. booking a tutorial, finding a library book, and a primary location sensitive information display

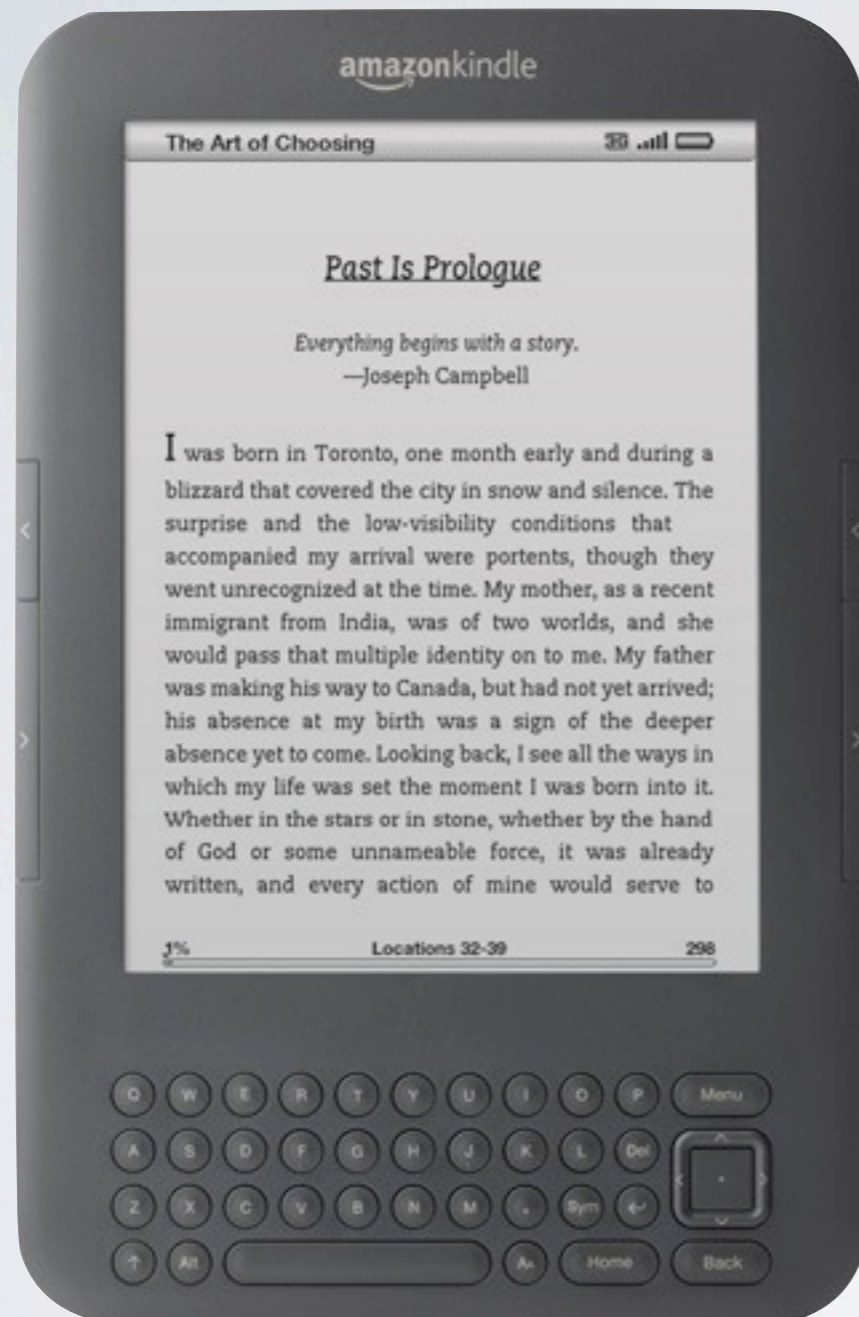

Samsung i5500 Galaxy Europa

SIM Unlocked \approx £140

Features

Android 2.1
QVGA 2.8" Screen
Quadband GSM +
3G
GPS

Wifi
3MP Camera
Accelerometer
Digital Compass
FM Radio

£111
Excellent Reading Experience
WiFi, Web Browser

Do you really want to write a native app
for each of these?

The available options (Q1 2009)

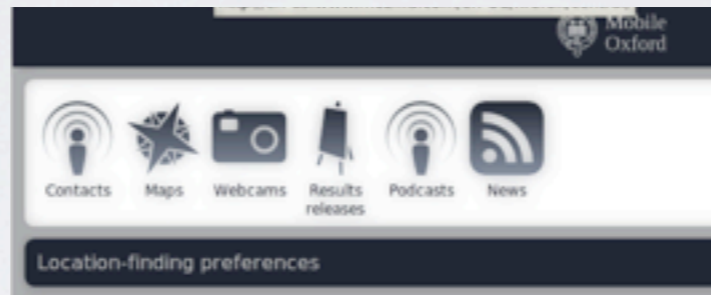

- + Was made freely available under MIT License Q1 2009.
 - + Works on many devices.
- Code was 'dumped' as open source
 - No community input
 - We were not a PHP shop

- + Promised fast deployment times (perhaps unrealistic)
- + Fully managed with contractual obligations
 - iPhone Only (at time)
 - Service had not been deployed anywhere
 - Vendor lock-in
 - Yearly fees
 - Development fees
- Long term sustainability/relevance unknown

The available options (Q1 2009)

Both required a lot of work on our side

Mobile Oxford work started in Q3 2009

It needed to be:

Accessible and Inclusive

For prospective students, current students, staff and the general public

An Open Source Community Project

The “community” being pivotal in its long term sustainability

Extensible and have significant longevity

Work on any web-capable device

Not reactionary.

A consistent UI

Perform a number of key functions server-side

Not proxying, not iframing etc.

mox^{βήτα} Mobile Oxford

Your university and city on the move

A wealth of information from across the University and City of Oxford.

Whoever you are, Mobile Oxford is your central guide to help you do your day-to-day tasks. Whether it's finding a library book, checking the next bus or even finding what time the nearest post box is collected Mobile Oxford is for you.

Discover Mobile Oxford's features

You don't need a fancy phone

A device with a web browser is all you need to be able to use most of the features below. Of course if you're lucky enough to own a smartphone you can use more advanced features like your GPS.

Use it now by visiting

m.ox.ac.uk

using your mobile device's web browser, preview on your computer or click on and scan a 2D barcode below

Molly Project

Molly is an open-source framework for developing mobile portals, aimed primarily at universities. It provides device detection and common logic for handling a variety of use cases.
